

SHARAN

DevOps Engineer

PROFESSIONAL SUMMARY

Results-driven DevOps Engineer with experience in cloud infrastructure, CI/CD automation, containerization, Linux administration, and secure network connectivity. Skilled in designing and managing deployment pipelines using GitLab CI/CD and Jenkins, deploying containerized applications with Docker, configuring Nginx reverse proxies, and implementing monitoring solutions with Prometheus and Grafana. Experienced in establishing secure hybrid-cloud connectivity through IPSec Site-to-Site VPN and SSL VPN tunnels between on-premises infrastructure and AWS environments. Strong background in production support, infrastructure automation, deployment optimization, and system reliability.

TECHNICAL SKILLS

Cloud Platforms: Amazon Web Services (AWS EC2, IAM, VPC, Security Groups, EBS)

DevOps Tools: GitLab CI/CD, Jenkins, Git, GitHub

Containerization: Docker, Docker Compose

Operating Systems: Ubuntu, Linux, Windows Server

Web & Application Servers: Nginx, PM2

Monitoring & Logging: Prometheus, Grafana, Node Exporter, Blackbox Exporter

Databases: MongoDB, Redis

Networking & Security: IPSec Site-to-Site VPN, SSL VPN, SSH, TCP/IP, DNS, HTTP/HTTPS, SSL/TLS, Firewall Configuration, Reverse Proxy, Network Routing

Scripting: Bash Shell Scripting, YAML

PROFESSIONAL EXPERIENCE

DevOps Engineer

Digicognit Private Limited

- Designed, developed, and maintained end-to-end CI/CD pipelines using GitLab CI/CD and Jenkins for automated application build, testing, and deployment.
- Managed AWS cloud infrastructure, including EC2 instances, security groups, storage volumes, networking, and production deployments.
- Built and deployed Docker images and managed multi-container applications using Docker Compose.
- Configured and optimized Nginx as a reverse proxy and load-balancing solution for frontend and backend applications.
- Automated deployments with minimal downtime through version-controlled release strategies and rollback mechanisms.
- Established secure connectivity between AWS and on-premises infrastructure using IPSec Site-to-Site VPN tunnels.
- Configured and maintained SSL VPN connectivity for secure remote administrative access to internal infrastructure.
- Collaborated with network teams to configure VPN gateways, routing policies, firewall rules, and tunnel monitoring for reliable hybrid-cloud communication.
- Implemented SSL certificates using Let's Encrypt (Certbot) to secure production applications.
- Configured Prometheus, Grafana, Node Exporter, and Blackbox Exporter for infrastructure and application monitoring.
- Created Grafana dashboards and alert rules to proactively monitor CPU, memory, disk utilization, application availability, and backup status.

- Automated MongoDB backup, retention, and restoration processes using Bash scripts and Cron jobs.
- Managed Linux servers by configuring services, permissions, networking, scheduled jobs, and package updates.
- Performed production troubleshooting by analyzing application logs, Docker logs, Nginx logs, and system logs to resolve deployment and infrastructure issues.
- Managed Git workflows, repository administration, branch synchronization, merge conflict resolution, and release management.
- Optimized deployment workflows by standardizing environment configuration and automating infrastructure-related tasks.

KEY ACHIEVEMENTS

- Successfully implemented secure IPSec Site-to-Site VPN connectivity between AWS and on-premises environments, enabling secure hybrid-cloud communication.
- Configured SSL VPN infrastructure for secure remote access to enterprise resources.
- Reduced deployment time by implementing fully automated GitLab CI/CD and Jenkins pipelines.
- Improved application availability through Docker-based deployments and automated rollback strategies.
- Designed centralized monitoring dashboards and alerting mechanisms using Prometheus and Grafana.
- Automated database backup, verification, and retention processes, reducing manual operational effort.
- Successfully deployed and managed multiple production applications with high availability and secure infrastructure practices.
